PROFILE

Dedicated Full Stack Developer with hands-on experience building and deploying over 5 real-world MERN stack projects. Skilled in modern web technologies including TypeScript, React.js, Next.js, and Node.js. Focused on writing clean code, optimizing databases with Redis, and handling end-to-end deployments using Docker, CI/CD pipelines, and AWS.

EDUCATION

Sant Singaji Institute of Science and Management

Bachelor of Business Administration

Sandalpur, Dewas, India

2023 – 2026

Fifth Mountain Academy

Higher Secondary School Certificate (12th, Commerce)

Khategaon, Dewas, India

2022 – 2023

SKILLS

Programming Languages: JavaScript, TypeScript, Java, HTML5, CSS3

Frontend Technologies: React.js, Next.js, Redux Toolkit, Tailwind CSS

Backend & Architecture: Node.js, Express.js, Microservices Architecture, System Design

Databases & ORM: MongoDB, MySQL, SQL, Redis, Drizzle ORM

Cloud & DevOps: AWS (EC2, S3, ECS, ECR), Docker, CI/CD Pipelines, Linux (Ubuntu)

Development & AI Tools: Git/GitHub, Postman, Cursor, GitHub Copilot

CERTIFICATIONS

- **Web Design & Development** – Skill India Digital Hub (NSDC) | Completed April 2026
- **Java Programming Certificate** – Comprehensive training in Core Java, Object-Oriented Programming (OOP), and Data Collections | Completed Nov 2024

PROJECTS EXPERIENCE

SkillsSync AI – [Live](#)

May 2026 – Jun 2026

- Built a full-stack AI recruitment platform (React 19, Node.js, MongoDB) with Google Gemini AI integration for automated resume parsing, skill-gap analysis, personalized learning roadmaps, and candidate match scoring — with database-level response caching and 24-hour rate limiting to reduce LLM costs.
- Engineered an AI candidate ranking engine delivering match scores, skill breakdowns, and hiring recommendations with weighted scoring, per-application caching, and graceful fallback during API quota exhaustion.
- Optimized performance using Redis caching with reusable middleware, MongoDB indexing, and a global RTK Query interceptor for automatic expired-session handling on the frontend.
- Implemented real-time notifications (Socket.io), transactional emails via Brevo, and end-to-end security with Argon2 hashing, JWT + RBAC, Google OAuth 2.0, Zod validation, and Cloudinary file uploads.

Blood Donation & Emergency Help Portal – [Live](#)

Nov 2025 – Dec 2025

- Engineered a role-based MERN stack portal to connect donors and patients, featuring JWT and Argon2 security for enforcing 90-day donor cooldowns, MongoDB aggregations, in-app notifications, and a dynamic availability dashboard.

Smart Leave Management System – [Live](#)

Jan 2026 – Feb 2026

- Architected an automated enterprise leave system using React.js, Node.js, and Redux Toolkit with a secure 4-tier RBAC, integrating Socket.io and Nodemailer for real-time alerts alongside Recharts for department analytics.
