PROFILE

MERN Stack Developer with project-based experience building web applications. Proficient in frontend design (React.js), backend engineering (Node.js/Express.js), database systems (MongoDB), and cloud deployment via Docker and AWS.

EDUCATION

Sant Singaji Institute of Science and Management

Sandalpur, Dewas, India

Bachelor of Business Administration

2023 – 2026

- Completed degree while dedicatedly upskilling in full-stack MERN development and modern cloud tools.

Fifth Mountain Academy

Khategaon, Dewas, India

Higher Secondary School Certificate (12th, Commerce)

2022 – 2023

SKILLS

Languages: JavaScript, Java, SQL, HTML5, CSS3

Frameworks & Libraries: React.js, Node.js, Express.js, Redux Toolkit, Tailwind CSS

Databases: MongoDB, MySQL, Drizzle ORM

Cloud, Tools & AI: Docker, AWS (EC2), Git/GitHub, Postman, Cursor, GitHub Copilot

CERTIFICATIONS

- Web Design & Development** – Skill India Digital Hub (NSDC) | Completed Apr 2026
- Java Programming Certificate** – Comprehensive training in Core Java, Object-Oriented Programming (OOP), and Data Collections.

PROJECTS

SkillsSync AI

Jun 2026 – Present

- Architected an AI-powered career intelligence platform to solve traditional keyword-matching inefficiencies by automating multi-format resume parsing and delivering high-accuracy job recommendations.
- Developed the scalable production platform using React 19, Redux Toolkit, Node.js, Express.js, and MongoDB, natively integrating Google Gemini AI for core data parsing and Cloudinary for file storage.
- Optimized the recruiter hiring pipeline by implementing an intelligent, custom candidate ranking algorithm featuring an execution time under 10ms that successfully reduced manual screening cycles.

Blood Donation & Emergency Help Portal – [Live](#)

Nov 2025 – Dec 2025

- Engineered a role-based emergency solution to eliminate chaotic and unorganized blood search workflows by creating a centralized system that connects donors and vital patients seamlessly.
- Built the end-to-end stack using React.js, Node.js, Express.js, and complex MongoDB aggregations, securing routes via JWT and Argon2 to strictly enforce a high-priority 90-day donor eligibility cooldown.
- Streamlined urgent response metrics by integrating an automated in-app notification engine alongside a dynamic analytics dashboard to monitor local and city-wise blood group availability.

Smart Leave Management System – [Live](#)

Jan 2026 – Feb 2026

- Architected an autonomous enterprise system to replace slow, manual paperwork approvals by engineering a secure, multi-level 4-tier Role-Based Access Control (RBAC) permission structure.
- Built the asynchronous logic using React.js, Redux Toolkit, Node.js, and Express.js, seamlessly integrating Socket.io and Nodemailer for instant leave submission alerts and status updates.
- Improved operational efficiency for organization heads by automating complex employee leave balance tracking and using Recharts to visualize department-wise monthly absence reports.
