PROJECTS

SkillsSync AI – Live

May 2026 – Jun 2026

- Built a full-stack AI recruitment platform using React 19, Node.js, and MongoDB, integrating Google Gemini AI for automated resume parsing and candidate match scoring, reducing manual screening time by over 50%.
- Engineered a candidate ranking engine delivering match scores and skill breakdowns, implementing per-application caching and graceful fallback mechanisms during API quota exhaustion.
- Optimized performance using Redis caching with reusable middleware and MongoDB indexing, improving data retrieval speeds by 40% and handling automatic expired-session management via global RTK Query interceptors.
- Implemented real-time notifications via Socket.io and end-to-end security with Argon2, JWT, and OAuth 2.0, ensuring secure file uploads to Cloudinary.

Blood Donation & Emergency Help App – Live

Nov 2025 – Dec 2025

- Engineered a responsive MERN stack portal connecting donors and patients, implementing MongoDB aggregations and Socket.io to power a dynamic real-time availability dashboard and instant match notifications.
- Integrated secure role-based authentication using JWT and Argon2, developing robust backend logic to strictly enforce 90-day donor cooldown periods with Zod schema validation ensuring data integrity.

Smart Leave Management System – Live

Jan 2026 – Feb 2026

- Architected an automated enterprise leave system using React.js, Node.js, and MongoDB, engineering a multi-level approval workflow with a secure 4-tier RBAC and integrating Socket.io for real-time alerts alongside Recharts for visualizing department analytics.
